SOME ADVICES TO CHOOSE OUR COMFORT AND SAFETY PRODUCT

THE SHOWER SEAT

It allows the user to have a shower while securely seated and thus, avoiding any risk of falling.

Foldable :

It ensures space gain when the seat is lifted !

Removable :

Perfectly adapted to health centres or hotels as it yields flexibility and then, can be used for several patients and customers.

Seat width : According to the person's morphology, the selection of the seat will be shifted towards either a standard size base or large size base.

Large full base :

The shower seat guarantees optimal comfort to the user and provides him greater stability when showering. Its full area makes cleaning easier and then is more hygienic. The stigmatizing aspect of a classic shower seat no longer exists.

Base with slats, standard or large size :

This seat facilitates water flow during the shower. However, it is more used in Institutions because it makes the grooming of patients easier for caregivers, while providing an optimal hygiene : water does not remain stagnant.

With backrest and armrests :

Armrests allow greater comfort as well as support and stability. The backrest improves well-being preventing the cold sensation of the tiles.

The additional seats :

The shower stools, with a standard or large width remain a complement device for a person who does not have any major handicap.

It is recommended to combine the shower seat with a 135° angled bar so as to make transfers easier thanks to the horizontal part of the bar and to lean on in order to stand up with greater ease.

THE GRAB BAR

There are different models. According to our needs, we'll choose either a straight or angled grab bar, or an hinged bar that should be settled between 70 and 80cm from the ground. Grab bars are designed to be set in bathrooms, and more specifically in the shower cabin near a shower seat, in toilets, in changing rooms. Whatever the use may be, fixings have to be adapted to wall bracket so as to ensure the user's safety.

Straight grab bars :

Generally settled horizontally or vertically, they strengthen the stability and make leaning on possible, prevent the risks of slipping or falling. They are also used to move from a place to another one.

Easy to grab and to use by a sitting or standing person, they should be placed to more than 0.40 m from an inner angle (except for toilets doors, cabins and areas of individual purpose which are not suitable).

They can also be used as a door closure/opening device. Therefore, bars from 40cm to 60 cm will be selected.

90° or 135° angled grab bars :

They are a great solution to help people from getting up thanks to the inclined part (135° bar) or vertical part (90° bar). Moreover, they make support and the forearm's rest possible.

The 135° bar is often set in toilets. Some bars allow the installation of a toilet roll / cane / soap holder on the same bracket.

Hinged bar :

Wall mounted and settled at 70-80cm from the ground for the upper part or at the washbasin's height, the hinged bar helps people from lifting up and from moving from a place to another one. The bars have different features : blocking system in vertical position to get more space, soft-close system to prevent the bar from falling brutally.

As it concerns the 80 cm hinged bars, it is recommended to add a support prop in order to ensure its stability.

Be aware of the quality of the wall on which the bar is fixed : if it is not solid enough (gypsum board), it is better to add a free standing fixing pole to avoid any risk of pulling out.

Shower bar :

Also used as a grab bar, it combines the shower bar function with the included bracket(s) for shower handset and allows people to lean on it when showering.

Some bars are modular and can be set in a T or L shape, which thus facilitates the adaptation to the existing devices such as taps.

OUR DIFFERENT TUBES

Elliptic tube :

It provides a better grip in comparison with the round tube for people with difficulties when squeezing their hands.

Round tube :

The round tubes with diameter of 25, 30, 32, 33 mm are the most common ones on the market. The choice of the diameter of a bar is made according to the user, considering his/her morphology and his /her disability with a view to provide him/her a suitable comfort.

For the use in Institutions, premises open to the public, the diameters from 30 mm will be favoured.

Tube with grip grooved strap :

It reinforces the adhesion to the bar and prevents hands' rotation and slipping. This anti-skid function is valuable and comforting in moist areas such as bathrooms.

Soft-coating tubes :

The soft touch of this coating provides a pleasant sensation for the person who is particularly sensitive to the contact.

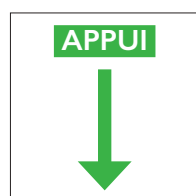

A PROFESSIONAL VIEW ON THE RULES ABOUT...COMFORT AND SAFETY

Our products meet uses and functions that are essential to describe in order to satisfy the users' needs. Those uses and functions, which are mentioned below, make possible to find the suitable solution to each need and to each user.

Transfer	Lifting up	Support	Balance	Resting position
When someone in a sitting position moves from a place to another one.	The change from a seated position to a standing position.	When keeping one's position leaning on a support.	When keeping one's standing or sitting position with stability, without flickering, especially when getting in a bathtub or a shower tray.	When keeping stability and comfort on a support so as to enable the body to relax.
