STIEBEL ELTRON DEM 3

Wherever smaller volumes of warm water are frequently required, the mini electronic instantaneous water heater DEM is the perfect choice.

This appliance delivers water at the electronically controlled set temperature without having to overcome long supply lines with resulting line losses. There are also none of the common water and energy losses resulting from manual temperature adjustment. Consequently, the DEM electronic is ideally suited to washbasins, where a constant outlet temperature is preferred.

GROHE BAU COSMOPOLITAN E INFRA-RED

The perfect combination of minimalistic design and comfortable features makes washing a real pleasure! With crisp lines and an elegant form the tap has a modern appeal and GROHE's innovative technology takes washing efficiency and comfort to a whole new level.

Its infrared sensor detects hand movement so the water only flows when it's needed – delivering luxury and saving precious water and energy. GROHE EcoJoy limits usage to 5.7 l/min without a drop in performance.
